

ViraPress™

Enhance Immunity and Promote Health*

ViraPress™ Instructions

Dissolvable Tablets

ViraPress™ is considered a nutraceutical that contains naturally derived purified bovine serum glycoproteins that signal the immune system with the intent of achieving optimal health and wellness. Each tablet contains trace amounts of purified bovine serum derived glycoproteins (<1%), along with other inactive ingredients (>99%): crystalline maltose disaccharide and magnesium vegetable stearate.

The glycoproteins found in **ViraPress™** are naturally occurring and may stimulate the body's immune system by encouraging the production of certain signaling proteins (known as cytokines) which can be deployed to *call to action* certain cells of the immune system when mounting a defense.

ViraPress™ works by signaling: it interacts with receptors in specific cells found within the mucous membranes of the mouth and throat. This interaction signals these cells (immune system cells) to produce cytokines which is a natural and normal response of the immune system. So, in effect, **ViraPress™** is like a team's coach: it motivates the immune system to increase the production of specific signaling cytokines which may provide a protective effect for the body by encouraging its own immune capabilities.

ViraPress™ is also hypothesized to potentially help restore communicating proteins (cytokines) that have been reduced or depleted in the human body for various reasons such as acute illnesses (from pathogens) and chronic illnesses, as well as the unintended consequences of modern lifestyles (i.e., toxicity). This theorized action may help the body's immune system become better equipped to combat attacks as they occur.

ViraPress™ Instructions

Dissolvable Tablets

The adult recommended usage of **ViraPress™** is to let one tablet dissolve completely under the tongue first thing in the morning (prior to ingesting food or liquids) and again in the evening. Try not to eat or drink anything for up to 15 minutes after the **ViraPress™** tablet has dissolved; this may help ensure that the cells of the mucous membranes have plenty of opportunity to interact with the proteins found in **ViraPress™**. Therefore, a fasting state in the morning is recommended. The active ingredient in **ViraPress™** does not enter the body's system; it simply initiates a signaling process. Therefore, **ViraPress™** is not effective if chewed or swallowed. Do not take if pregnant or breast feeding; the safety of **ViraPress™** has not been established in pregnant or breastfeeding women. The safety of **ViraPress™** has not been evaluated in children and is recommended for adults only.

ViraPress™ contains NO soy, NO gluten, NO artificial fillers, NO GMO derived ingredients, and NO antibiotics.
